1. Background and Existing Conditions

Chautauqua Lake is a vital natural resource in Western New York that is essential to Chautauqua County's environmental health, tourism, and local economy. Over the last 50 years, Chautauqua Lake has been the subject of numerous water quality studies. These studies have indicated that substantial health and environmental problems were occurring, and private on-site sewage treatment systems were a major contributor to phosphorus and nitrogen loadings. Due to several studies and significant sampling, the New York State Department of Environmental Conservation (NYSDEC) designated the Lake as an impaired water body per Section 303(d) of the federal Clean Water Act in 2004. Then in 2012, the NYSDEC implemented a Total Maximum Daily Load (TMDL) for phosphorus allocation for the Lake aimed at improving water quality and reducing the common occurrence of harmful blue-green algal blooms. The TMDL requires significant reductions in nutrient sources across the watershed, including runoff from agricultural/urban lands and from failing septic systems or wastewater treatment facilities.

As a result of these studies, Chautauqua County has been proactive in providing public sewers around most of the Lake. However, one area on the northeastern side of the Lake remains without public sewers. This area does not currently have access to a centralized public sewer system. Sewage disposal for the area generally consists of several small private on-site treatment systems for the various residences, camps, private communities, and developments. This project aims to address this gap by constructing public sewer infrastructure along the northeastern portion of the Lake, improving environmental quality and public health.

This Map, Plan, and Report (MPR) was prepared as a result of the findings, recommendations, and detailed evaluations outlined in the East Chautauqua Lake Sewer Extension Preliminary Engineering Report (PER) dated November 2024. The improvements included within this MPR summarize PER recommendations. The South & Center Chautauqua Lake Sewer District Phase 3 project is envisioned to be operated, maintained, and managed by the South and Center Chautauqua Lake Sewer District (SCCLSD).

This MPR has been prepared to support the formation of a sewer district in accordance with the requirements outlined in Article 5-A of New York State County Law.

2. Service Area and Equivalent Dwelling Units

2.1. Service Area

The project area is located along the northeastern shoreline area of Chautauqua Lake and spans portions of the Town of Chautauqua and Town of Ellery, Chautauqua County, New York. A map depicting the project area and existing public sanitary sewer infrastructure around Chautauqua Lake is included in Figure 1. The proposed sanitary sewer system will service approximately 395 developed parcels and 68 undeveloped vacant buildable parcels. Detailed district boundary maps are included in Figure 2 and a boundary description is included in Appendix A.

2.2. Equivalent Dwelling Units

An equivalent dwelling unit (EDU) is the unit to which a community charges a customer for utility service. An EDU generally equates all customers to a typical single family home, with one single family being assessed one EDU. The SCCLSD already has an EDU assessment structure in place, which will be utilized for this district extension for purposes of consistency.

Based on this EDU assessment structure and NYS property classes for each parcel within the new service area, the proposed South & Center Chautauqua Lake Sewer District Phase 3 will include approximately 623.2 EDUs. There will be an additional 9 EDUs located within the existing Center Chautauqua Lake Sewer District that will be serviced by the project. These 9 EDUs will not be included within the South & Center Chautauqua Lake Sewer District Phase 3 district boundary, however they will be assessed the same debt service and O&M as parcels within the new Phase 3 district since they will be serviced by the new infrastructure. A breakdown of the EDU assessment for each property is included in Appendix B.

3. Proposed Facilities

3.1. Public Infrastructure:

Proposed facilities will include the construction of gravity and low-pressure sanitary sewer collection system infrastructure within the Phase 3 service area that will discharge into the existing SCCLSD collection system. Existing SCCLSD infrastructure will then be utilized to convey and treat the additional flows generated by the district extension. In addition to the new collection system infrastructure, flow equalization from the district extension will be implemented, along with necessary upgrades to the existing South and Center Chautauqua Lake Sewer District (SCCLSD) collection and treatment infrastructure, to accommodate the increased flows resulting from the district extension. A map depicting the proposed facilities is included in Figure 3. The proposed facilities will generally be inclusive of the following:

- 22,000 LF of 8-inch Gravity Sewer Main
- 9,600 LF of 4-inch Gravity Sewer Laterals
- 92 Manholes
- 193 Gravity Sewer Connections
- 2 Small Main Pump Stations
- 3 Medium Main Pump Stations
- 2 Large Main Pump Stations
- 20,400 LF of 10-inch HDPE Pressurized Sewer Main
- 8,500 LF of 8-inch HDPE Pressurized Sewer Main
- 10,500 LF of 4-inch HDPE Pressurized Sewer Main
- 4,400 LF of 3-inch HDPE Pressurized Sewer Main
- 6,350 LF of 2-inch HDPE Pressurized Sewer Main
- 24,750 LF of 2-inch HDPE Pressurized Sewer Laterals
- 109 Simplex Grinder Pump Stations
- 7 Duplex Grinder Pump Stations
- 4 Grinder Booster Pump Stations
- 29 Force Main Cleanouts
- 48 Force Main Valves
- 15 Air/Vacuum Release Manholes
- Flow Equalization Tank and Infrastructure
- Upgrades to existing piping and pump stations utilized for conveyance
- Upgrades to existing treatment infrastructure utilized for treatment

3.2. Sanitary Sewer Service Connections

The proposed facilities will not include the physical connection of developed parcels within the service area to the new sanitary sewer facilities. This work is generally considered private and is not eligible for public funding, as determined by the NYS Comptroller. Each developed parcel will be provided with a grinder pump or a sewer lateral extending to the property line or

located on the parcel. Property owners will be required to contract with a qualified plumber to connect to the public sewer system extension. The work the property owner is responsible for includes:

- Connection to the sewer lateral extending from the gravity sewer main or grinder pump.
- Decommissioning of existing on-site wastewater treatment systems.

Upon completion, the South and Center Chautauqua Lake Sewer District will inspect the work. The one-time cost for connecting to the sanitary system is estimated to range from \$5,000 to \$7,000 in contracted costs, which will be paid directly by the property owner.

3.3. Private Infrastructure

In some cases, existing private collection system infrastructure that services small communities or camps within the district extension may be inspected to assess its condition and potentially dedicated to the County as part of South & Center Chautauqua Lake Sewer District Phase 3. Once dedicated to the County, this infrastructure would be considered public and owned by the District. This infrastructure could include existing sewer piping, pump stations, and/or sanitary tankage. If determined necessary during the inspection, improvements or modifications may be made to the existing infrastructure as part of the project to bring it into compliance with County standards or to meet the requirements of the project. These upgrades could include repairs, replacements, or other adjustments to ensure the infrastructure is functional and capable of supporting the new sewer district.

4. **Estimated Project Cost and Financing**

4.1. Project Capital Cost Estimate

The estimated probable capital cost for the proposed facilities is detailed in Appendix C. The maximum amount to be expended for the South & Center Chautauqua Lake Sewer District Sewer Phase 3 is \$35,590,000.

4.2. Estimated Operation and Maintenance Cost

In coordination with the SCCLSD, sewer users within the district extension would be charged \$354 per year per EDU for operations and maintenance (O&M) based on current rates. This charge is and would be equivalent to the amount assessed to existing SCCLSD users and excludes any capital debt charges.

4.3. Estimated Debt Service Cost

The proposed project will not be affordable to residents without the County obtaining significant grant funding. It is anticipated that the County will receive a 0% interest, 30-year loan as well as significant grant funding. Funding is envisioned to be provided through programs managed by the New York State Environmental Facilities Corporation (NYSEFC) or the New York State Department of Environmental Conservation (NYSDEC). The estimated annual debt service for the proposed facilities will vary depending on the actual funding received. However, based on four (4) plausible funding scenarios, debt service costs are estimated to range from \$458 to \$1,397 per occupied Equivalent Dwelling Unit (EDU) per year.

4.4. Vacant Parcels

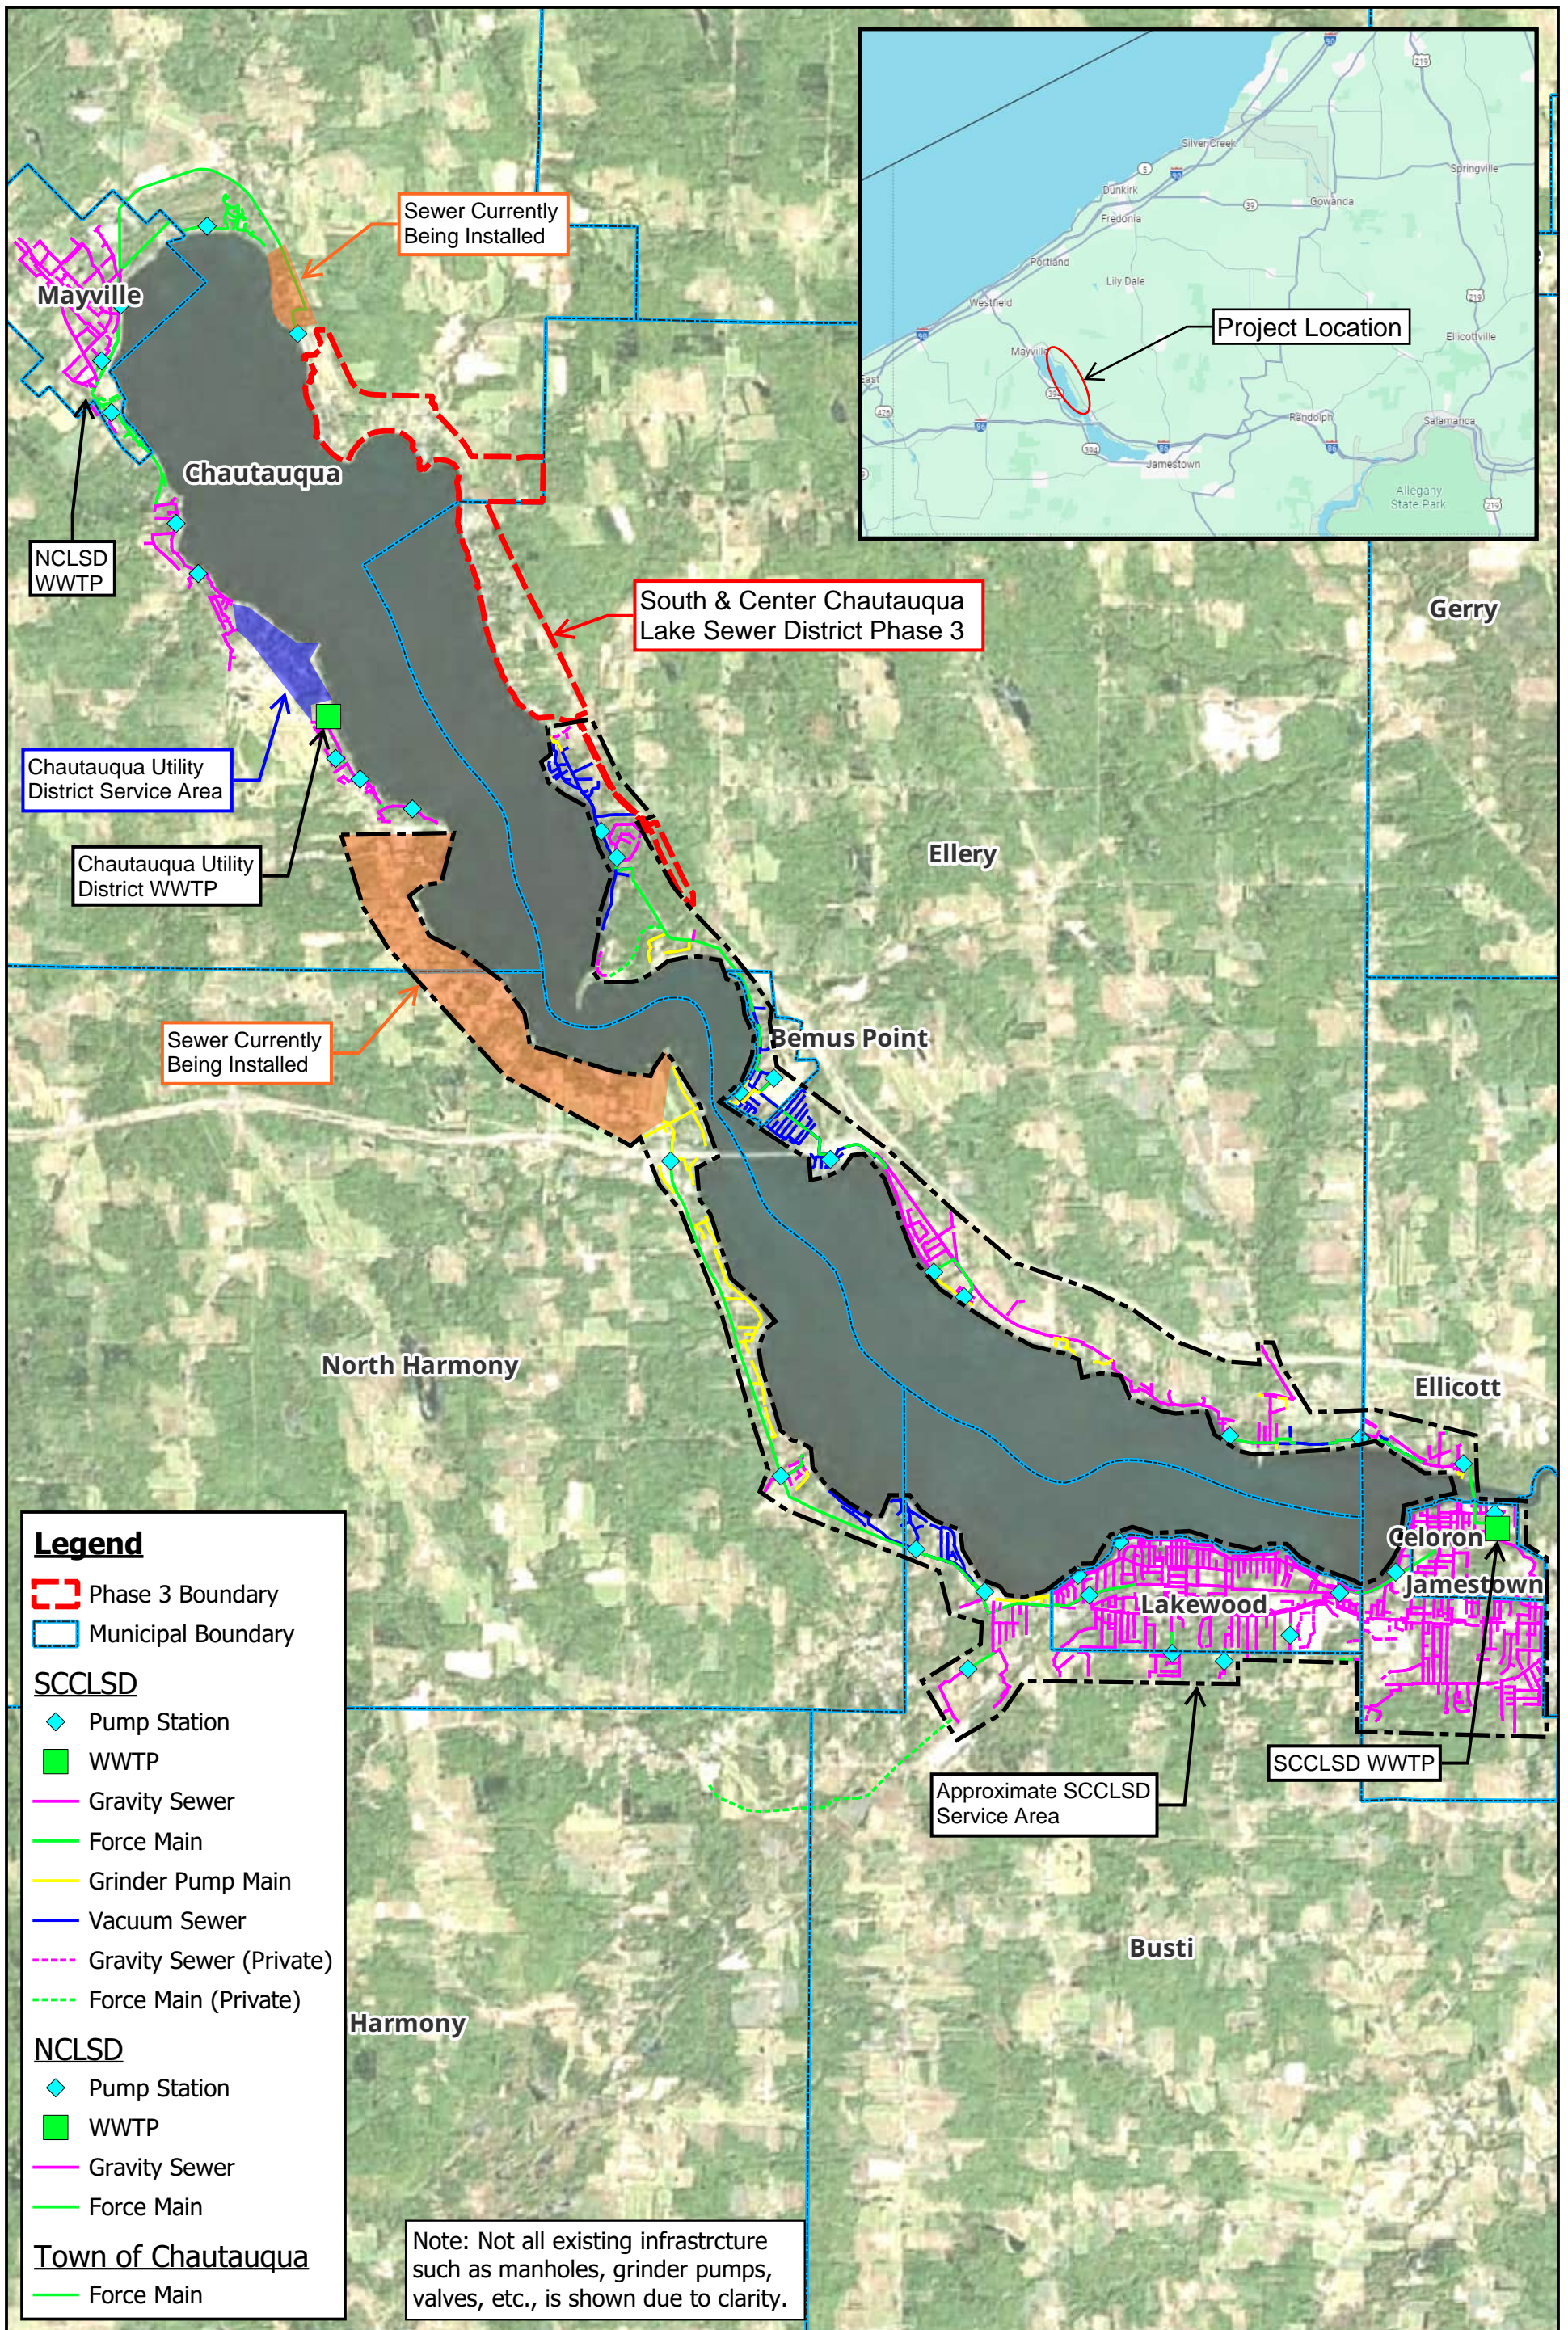

Vacant buildable parcels within the district will be assessed a sewer benefit charge of \$100 per year. All charges assessed to vacant parcels will be applied solely to the debt service for the district extension until the sewer debt is fully paid off.

4.5. Total Estimated Annual User Cost Impacts

The annual user cost per Equivalent Dwelling Unit (EDU) is estimated to range from \$812 to \$1,751, inclusive of anticipated operations and maintenance (O&M) and debt service charges. Historically, the County has considered \$1,000 per EDU per year to be an affordable sewer rate. To achieve this goal the County would need to secure approximately \$23 million in grant funding. A breakdown of the user costs and four (4) plausible funding scenarios is included in Appendix D.
